CASE STUDY | CLIENT CONFIDENTIAL

**FACILITY SECURITY PLAN  
DEVELOPMENT FOR OIL AND  
PETROCHEMICAL CLIENTS**

**CHALLENGE**

Our client purchased two oil and petrochemical storage terminals in a port in Texas. Both of these facilities previous owners had not been attentive to the security requirements set by federal regulation, and required major security improvements to meet those regulatory requirements.

**SOLUTION**

Our experts provided guidance on needed physical security and cyber security measures, monitoring systems, personnel training, conducting drills and exercises, and security program management. We also wrote the Facility Security Plans for both terminals.

**RESILIENCE DELIVERED**

Both terminals' Facility Security Plans were approved by the U.S. Coast Guard, enabling the facilities to begin operations. Witt O'Brien's continues to support the client with ongoing security consulting, security program management and training of facility personnel.

**WITH YOU WHEN IT COUNTS**

**SECURITY**

Inattention, a poor security plan or a lack of appropriate training are usually the root causes.

Keeping your office, site or information safe is a process, like any other, stemming from a good understanding of the risks at the outset, care in policy design and disciplined application.
